Django to insert values into mysql database:

or use
pip install PyMySQL
and in setting.py file add
import pymysql
pymysql.install_as_MySQLdb()

1) pip install mysqlclient

2) in settings.py file

```
DATABASES = {
    # 'default': {
    #     'ENGINE': 'django.db.backends.sqlite3',
    #     'NAME': os.path.join(BASE_DIR, 'db.sqlite3'),
    # }
    'default': {
        'ENGINE': 'django.db.backends.mysql',
        'NAME': 'Inpro',
        'USER': 'root',
        'PASSWORD': 'naseema',
        'HOST': 'localhost',   # Or an IP Address that your DB is hosted on
        'PORT': '3306',
    }
}
```

3)models.py

from django.db import models

from django.forms import ModelForm,Textarea

class Users_Login(models.Model):

    # these are mysq col names

    user_name=models.CharField(max_length=100)

    email=models.CharField(max_length=100)

    pwd=models.CharField(max_length=100)

4) python manage.py makemigrations

5)python manage.py migrate

6)go to mysql db and type show tables

```
mysql> use inpro;
Database changed
mysql> show tables;
+----------------------------+
| Tables_in_inpro            |
+----------------------------+
| auth_group                 |
| auth_group_permissions     |
| auth_permission            |
| auth_user                  |
| auth_user_groups           |
| auth_user_user_permissions |
| django_admin_log           |
| django_content_type        |
| django_migrations          |
| django_session             |
| login_users_login          |
+----------------------------+
11 rows in set (0.00 sec)
```

STEP -2

7)project →urls.py

```
from django.contrib import admin
from django.urls import path,include
```

```
from login import views
urlpatterns = [
    path('',include('login.urls')),
    path('admin/', admin.site.urls),
    path('new/',views.newPage),
]
```

8) app urls.py

```
from django.urls import path
from . import views
urlpatterns = [
    path('',views.one,name='loginone'),

]
```

9)views.py

```
from django.shortcuts import render
#from django.shortcuts import render
from django.http import HttpResponse
from .models import Users_Login
# Create your views here.
def one(request):
            return render(request,'home.html')
# Create your views here.
def newPage(request):
        ids=request.POST.get("user_nameF")
        pwds=request.POST.get("pwdF")
        emailM=request.POST.get("emailF")

        sref=Users_Login(user_name=ids,pwd=pwds,email=emailM)
        sref.save()
        return render(request,'result.html',{"message":"registered"})
```
